2. Technology, language used during the internship.
3. Puzzles.
4. A total number of shaving razors sold in India in a year.
5. A total number of French Fries sold in McDonald's in India in a day.

Job details:

A typical day in this role:

Since I am working for a US client, the working hours start in the afternoon and end at night. A meeting is conducted at the beginning of the shift by the supervisor, and the schedule for the day is set. There could be 1-2 more meetings in the latter part of the day with clients based on requirements.

Expectations vs reality. Growth in 1-2 years:

It has matched my expectations from many aspects. Based on your performance, you get promoted to Senior Business Analyst after 12 to 15 months.

Types of projects are you given:

Currently, I'm working on SAS (Statistical Analysis Software), Unix Shell scripting and Excel. The type of work primarily depends on the client you are part of and the team. I am working on a project which involves automating SAS codes through macro.

There are other clients as well. Some of them use different languages like Python, SQL, R or various tools like Power BI or Tableau.

The work culture, employee benefits, etc. about the company:

The work culture is perfect. This is one of the most critical aspects of EXL. The supervisor is supporting and acts as a mentor.

You get medical insurance, cab facilities, the opportunity to work in the US or UK based on your client, a performance bonus from the client, and EXL.

Anant Kumar Ray, a batch of 2020 – MME.
